

The City of Millersville Fire Department is accepting bids for SCBA's to be purchased in the current fiscal year. Bid specs are available at www.cityofmillersville.com at the bottom of the home page. Sealed bids must be received at

**1246 Louisville Highway
Goodlettsville, TN 37072**

by 2:00 P.M. on November 15, 2021

Bid Specifications for SCBA's

- I. Approvals**
1. Apparatus shall be approved by the National Institute for Occupational Safety and Health (NIOSH), under 42 CFR, Part 84
 2. for chemical, biological, radiological, and nuclear protection (CBRN) with 30-, 45-, 60-minute-rated service life
 3. and compliant with all requirements of the National Fire Protection Association's 2018 Edition of NFPA-1981
 4. Standard on Open-Circuit Self-Contained Breathing Apparatus
 5. 2. Units equipped with integrated PASS device must meet requirements of NFPA 1982, 2018 edition
 6. 3. Units equipped with emergency egress system shall also comply with NFPA 1983 Standard on Fire Service Life Safety
 7. Rope and System Components, 2017 Edition; Type: Escape
 8. 4. Units equipped with accountability system must meet minimum requirements for FCC part 15 and part 90

II. Specific Requirements

Facepiece

1. Facepiece shall have removable inhalation check valve to prevent exhaled air from entering and contaminating regulator (demand valve).
2. Facepiece shall have open port to provide minimal breathing resistance when regulator is not attached
3. Facepiece shall not contain electronic components
4. Facepiece shall provide means to display to user with visual indicators for HUD
5. Facepiece shall have icon for HUD system status indicators
6. Facepiece shall have regulator attachment that does not bear any weight on lens
7. Facepiece shall have effective field of view of 86% and overlapping field of view of 122% without attached component
8. Facepiece shall be available in three sizes in Hycar Rubber (small, medium, large)
9. Facepiece shall have nose cup comprised of silicone rubber and available in three sizes (small, medium, large)
10. Facepiece shall have three head harness options constructed of flame/heat resistant assembly: Kevlar Head Harness 4-pt. adjustable
11. Facepiece shall have universal lens that can be used with all three facepiece sizes, shall be comprised of non-shatter type material and shall be field-replaceable
12. Lens shall be hard coated on outside and anti-fog coated on inside

13. Facepiece shall have optional flame/heat-resistant fabric or rubber neck strap to carry facepiece in ready position for quick donning
14. Facepiece shall have removable speaking diaphragm with aluminum-coated membrane, suitably protected and located centrally on facepiece for optimal voice projection
15. Facepiece shall have exhalation valve that is to be serviceable without special tools
16. Facepiece shall be capable of water submersion for cleaning and disinfection
17. Facepiece provides RFID chip for optional asset & maintenance tracking

Mask-Mounted Regulator (Demand Valve): Push-to-Connect

1. When doffing regulator, regulator disengagement shall simultaneously stop air flow and release regulator
2. Regulator shall house electronic module that functions as microphone and HUD system
3. Regulator shall be equipped with variable flow bypass
4. Regulator shall not have exposed wiring in order to prevent snags and increase product durability
5. Regulator shall have two cover options: hard cover or purge cover
6. Regulator shall have fewer than 35 parts that are easily replaceable without special tools
7. Regulator shall have Continuous hose from pressure reducer to regulator
8. Regulator must be equipped with positive protection Tetraplex Shield membrane that covers diaphragm, preventing permeation of CBRN agents
9. Regulator shall have RFID chip for optional asset & maintenance tracking

Heads-Up Display (HUD)

1. Heads-Up Display (HUD) System shall be integrated within regulator, eliminating snag hazards and increasing product durability
2. HUD shall be powered from central power system
3. HUD System shall eliminate cross-talk among firefighters
4. HUD System shall be immune to radio frequency interference (RFI) and must function properly in close proximity to fire service hand-held radios
5. HUD System shall separate pressure indicators from status indicators:
 - 1) Left: status indicators
 - 2) Right: pressure indicators
6. HUD system shall provide user with remaining cylinder air volume, available in four increments through series of four colored LEDs:
 - 1) Four green lights 76-100% cylinder volume
 - 2) Three green lights 51-75% cylinder volume
 - 3) Two flashing amber lights 36-50% cylinder volume
 - 4) One flashing red light 0-35% cylinder volume
7. HUD status indicators shall be icon-based and display battery life warning, PASS alarms, EVACUATE indicator, and secondary alarm indicator

8. HUD shall incorporate photoelectric sensor that senses ambient light conditions, automatically adjusting display to one of multiple pre-programmed light intensities
9. Buddy lights shall be visible from outside of firefighter's facepiece
10. HUD system shall allow user to select from four modes of operation:
 - 1) Continuous pressure mode that shall always have pressure LEDs on
 - 2) Intermittent pressure mode that shall turn on first three increments when reached for 20 seconds
 - 3) Oscillating pressure mode that shall brighten and dim LEDs every 20 seconds
 - 4) Mixed pressure mode that shall turn on first two increments when reached for 20 seconds and last two increments are in continuous mode
11. HUD shall be field-removable and replaceable without use of special tools

Universal Air Connection (UAC)

1. System shall be capable of:
 - 1) Refill within immediately dangerous to life or health (IDLH) atmospheres
 - 2) Transfilling between two SCBA wearers (connection allows for donation and receipt of air), providing emergency breathing system (EBS) while maintaining NIOSH approvals
 - 3) Quickly refilling (approximately one-minute duration) SCBA cylinder from mobile compressor, cascade system or RIT pack
 - 4) Extending wearer's air supply over longer duration when remote cascade system or other compressed gas source is located within remote area
2. Primary UAC shall be illuminated when supply pressure reaches Low Pressure Warning Alarm or can be configured to optional medium pressure warning alarm
3. SCBA shall have secondary options for UAC to be mounted on user's waist
4. Transfilling is possible only with 4500 & 2216 psig
Pressure Reducer (First-Stage Regulator) with Primary Low-Pressure Warning Device
 1. Pressure reducer shall incorporate downstream valve to ensure fail-safe design when in open position
 2. Pressure reducer shall incorporate bell alarm mechanism
 3. Bell alarm mechanism shall be an air-actuated, continuously ringing audible warning alarm, automatically operating when supply cylinder air pressure reaches approximately 35% of rated service life
 4. Bell alarm mechanism shall cover multiple levels of frequencies to cover all hearing levels
 5. Bell alarm mechanism shall be user-accessible while wearing SCBA
 6. Pressure reducer reduces cylinder pressure to outlet pressure not to exceed 115 psi; outlet pressure must be adjustable
 7. Pressure reducer shall have flow capacity of 700 liters per minute at full pressure
 8. Pressure reducer shall have two options for cylinder connection type: threaded or quick-connect
 9. Quick-connect connection shall not be removable from cylinder while under pressure
 10. Pressure reducer shall have one option for cylinder connection location: remote connection
 11. Pressure reducer shall be capable of converting from threaded to quick-connect or vice versa

12. Pressure reducer body shall be constructed of high-strength aluminum alloy and anodized with Teflon hard coat to minimize corrosion and wear of internal and external components
13. Pressure reducer shall be sealed system that does not allow moisture to enter valve components
14. Pressure reducer shall have no more than 42 individual regulator replacement parts
15. Pressure reducer shall not require special tools for disassembly
16. Pressure reducer shall have two accessory ports, one medium pressure and one high pressure

Cylinders

1. Cylinders with 4500 psig operating pressure must be 45minute durations.
2. Cylinders must be available in operating pressure: 4500
3. Cylinder shall be constructed of deep-drawn, seamless aluminum liner that is fully wound over entire surface (except for thick neck area) with high-strength carbon fiber filaments impregnated with epoxy resin
4. Cylinder shall contain cylinder valve that shall incorporate pressure gauge to indicate cylinder pressure at all times. Pressure gauge face shall be luminescent. Hand wheel shall be placed at 90° angle from cylinder axis.
5. Remote connection is threaded.
6. Cylinder valve shall incorporate flow control insert to limit air flow over hand wheel's first half-rotation, minimizing propulsion thrust in event that cylinder is mishandled
7. Cylinder valve shall incorporate CGA thread that can be converted to quick-connect cylinder without special tools
8. Cylinder shall have bracket and boot that can be user-installed and provide positioning and added security of cylinder to backplate.
9. Cylinder shall be available with locking handwheel option.

PASS Device

1. PASS device shall contain power, control, and battery modules
2. Power module shall provide power to all electronic SCBA components from battery module and act as central power system
3. Power module shall act as central command center, distributing all information and data among electronic components
4. Battery module shall be powered by one lithium-ion rechargeable battery
5. PASS device shall design for battery level check and removal of batteries while SCBA remains in jump seat
6. Power module shall be capable of illuminating UAC fitting when supply cylinder reaches 35% of rated service time
7. Control module shall have analog and digital display for added redundancy. Analog gauge must be positioned above digital display as viewed by user
8. Control module shall be equipped with full color graphical display. Display shall be reprogrammable and capable of future integrations. Display's background color coordinates with HUD pressure status.

9. Control module shall automatically provide information to user when placed in upright position. Device can be manually activated by pressuring reset button
10. PASS device shall use single line to connect power and control module
11. Control module shall have two reset buttons that perform same function no matter which button is pressed
12. Control module shall have alarm button to activate full alarm and is to be illuminated
13. PASS device shall be capable of being reprogrammed to fire department standard operating procedures (SOP). Using PC software program, configuration tag can be created and tagged on each device needed. Reprogramming options are as follows:
 - 1) Medium pressure alarm.
 - 2) Pressure drop alarm.
 - 3) Primary temperature alarm.
 - 4) Secondary temperature alarm.
 - 5) Audible low-pressure alarm
14. PASS device shall be equipped with buddy lights on firefighter's front and back and viewable from 360° view; two buddy lights on front of user and four buddy lights in back of user
15. PASS device shall have colored buddy lights: green (pressure above 50% and no alarms), yellow (pressure between 36 and 50%) or red (below 36% or alarms are active).
16. Power module shall be equipped with dual sound emitters; sound emitters shall perform at minimum 100 dBa in room temperature
17. PASS device shall be capable of storing up to 36 hours of use information in event log form that are generated each time SCBA is pressurized. Event logs must indicate on/off cycles, alarms, alarm reset, and tagging events
18. PASS device shall be capable of storing periodic logs. Periodic logs must indicate cylinder pressure for each SCBA pressurization stored at 30-second intervals
19. PASS device's event and periodic logs shall provide ability to download to personal computer for maintenance records or for use in incident investigations
20. PASS device shall be immune to radio frequency interference (RFI) and must function properly in proximity of fire service hand-held radios
21. PASS device shall have optional time-remaining display. Time remaining function must update calculations every 30 seconds based upon user's previous three minutes of air consumption. Initial calculation will appear after three minutes. Calculations can be made to zero pressure, low pressure alarm or medium pressure alarm
22. PASS device shall employ gasket perimeter seal to provide highest protection level against water ingress, while providing ability to upgrade or repair electronics
23. PASS device shall be capable of electronically storing user's name into memory via ID tag
24. PASS device shall be removable with no more than two screws
25. Control module shall have service mode that provides ability to see number of hours used, connect to PC and firmware versions
26. Control module shall incorporate rubber boot for added protection and is to be replaceable
27. Power and Control Modules shall have RFID chip for optional asset & maintenance tracking

Speaker Module

1. Speaker module shall provide amplified speech that removes inhalation breath noise
2. Speaker module shall provide at minimum, 70 dBa output
3. Speaker module shall turn on and off with PASS device
4. Speaker module shall be powered by central power system
5. Speaker module shall be positioned on chest and attached to shoulder straps.
6. Speaker module shall be capable of being mounted on either left or right shoulder strap
7. Speaker module shall easily be attached and removed without special tools
8. Speaker module shall have light to indicate that device is powered on
9. Speaker module shall have on/off button to allow user to manually power off as needed

Emergency Escape Breathing Support System

1. As option, emergency escape breathing support system must be accommodated by SCBA
2. System must be available with common SCBA quick-disconnect fitting
3. System shall connect to intermediate pressure side of SCBA, downstream of pressure reducer
4. System shall have both male and female connections
5. System shall have universal (Rectus) fitting

Carrier and Harness

1. Shoulder harness shall have separate left and right pads for easier and less costly replacement
2. Shoulder harness shall have retro-reflective markings for better visibility within low light conditions
3. Shoulder harness shall have localized friction pads on shoulders to prevent slippage
4. Shoulder harness shall be available in standard and serviceable tunnel
5. Shoulder harness shall have improved color stability up to 600°F
6. Shoulder harness shall be capable of washing at least 40 times while maintaining color fastness
7. Shoulder harness shall have chest strap
8. Harness design shall have Kevlar webbing
9. Shoulder harness shall have accessory attachment point available for facepiece or pouch and can be easily moved from one shoulder strap to the other
10. Shoulder harness shall differentiate pad inside from pad outside by color; pad inside is grey and outside is black
11. Waist pad shall be available in Adjustable swiveling – standard pad attached to metal bracket that has three positions and automatically centers
12. Adjustable swiveling waist pad shall be one-handed operation and can be performed while on user's back
13. Backplate shall be capable of accepting all three waist pad designs
14. Backplate shall have two side handles and one top handle that are accessible with gloved hand.
15. Backplate side handles shall be capable of 500 lbs. of static force
16. Backplate top handle shall be capable of 1000 lbs. of static force
17. Backplate cylinder band shall be available in metal
18. Waist pad shall be of rigid construction to allow for easy donning and support

19. Waist straps shall be double-pull forward design
20. Harness design shall have regulator keeper for storage that can be attached to waist strap or chest strap
21. Regulator keeper shall allow regulator to be connected at any angle

Weight

1. Weight of SCBA shall not exceed 24 lbs.
2. Weight of facepiece (without regulator, with communications) shall not exceed 1.4 lbs
3. Weight of cylinder and valve assemblies (empty) shall not exceed:

Cylinder Type	Weight
Carbon-wrapped L30	8 lbs. 0 oz.
Carbon-wrapped H30-SL	7 lbs. 4 oz.
Carbon-wrapped H45	9 lbs. 7 oz.
Carbon-wrapped H45-SL	9 lbs. 10 oz.
Carbon-wrapped H60-SL	11 lbs. 12 oz.

Cylinder Type	Weight
Carbon-wrapped L30	8 lbs. 0 oz.
Carbon-wrapped H30-SL	7 lbs. 4 oz.
Carbon-wrapped H45	9 lbs. 7 oz.
Carbon-wrapped H45-SL	9 lbs. 10 oz.
Carbon-wrapped H60-SL	11 lbs. 12 oz.

Asset and Maintenance Tracking Software

1. Should work on both desktop as well as mobile device
2. Must have the ability to track and report on assets including but not limited to SCBA, Facepieces, Cylinders, and Parts
3. Must have the ability to track and report on Maintenance, including but not limited to Work Orders, cylinder fill and which fill station was used, cylinder hydro static testing, SCBA flow tests
4. Must also have the ability to track and report on Fit Tests
5. Must also have the ability to track and report on Purchase Orders
6. Must have the ability to alert the user on any upcoming fit tests, cylinder hydro static testing, and SCBA overhaul that may be needed
7. Information must be stored in a manner that is updated seamlessly and instantly across all devices

Power Source

1. All components of the SCBA must be powered from single power source
2. Power source must have the ability to interchange between alkaline and rechargeable without making adaptations to the SCBA itself
3. Alkaline battery must be powered by six C cell batteries
4. Alkaline battery must weigh no more than 1lbs. 5oz.
5. Rechargeable battery must weigh no more than 1lb.
6. Rechargeable battery must recharge from full discharge in less than 7 hours
7. Rechargeable battery recharge temperature range must fall between 32°F and 104°F.
8. Rechargeable battery will have full charge capabilities for no less than 300 cycles.
9. Rechargeable battery Charger must be a smart charger which will rapid charge, analyze condition, and switch to trickle charge mode when charge is complete
10. Rechargeable battery Charger must have charging indication lights

Integrated Thermal Imaging Camera

1. Must have option for thermal imaging camera to be integrated into control module color display
2. Must have 220 x 176 resolution
3. Integrated Thermal Imaging Camera must have option for 5 user selected color palettes available on control module color display
4. Must be powered by central power source
5. Must have 30 hZ refresh rate
6. Thermal Imaging Camera must add no more than 4.2 oz. in additional weight to the SCBA
7. Thermal Imaging Camera must add no more than 1.25" in additional length to the SCBA

Upgradeability

1. Must be Bluetooth® enabled
2. Must be able to receive updates to firmware via a Bluetooth® connection
3. Control module must have Bluetooth® icon visible to display connection status
4. Must have the ability to upgrade standard control module to integrated thermal imaging camera control module
